Beta 2023.10.3.105

Beta 2023.10.3.105 is a Resonite version released on 2023/10/03.

The following notes were sent by [Frooxius](#):

Hello everyone! We're still working on a bunch of cloud stuff, administrative stuff and such, so the builds are a bit light on updates for now.

One of the features that is being finalized now is ability to assign/update Patreon perks, as part of that all badges related to events have been transformed to proper event badges.

If you find that one of your badges is missing with this build, please open a ticket at <https://support.resonite.com/> with details and we'll get it sorted out!

Tweaks:

- Transformed event badges to actual event badges, instead of using the custom badge system
 - This is preparation for commands for setting/updating your own custom badges

Locale:

- Merged Japanese locale updates by @orange3134 and @rabbuttz
 - This includes the Steam store page, which is now available in Japanese!
